

School Fair

Lek and Luca's School Fair

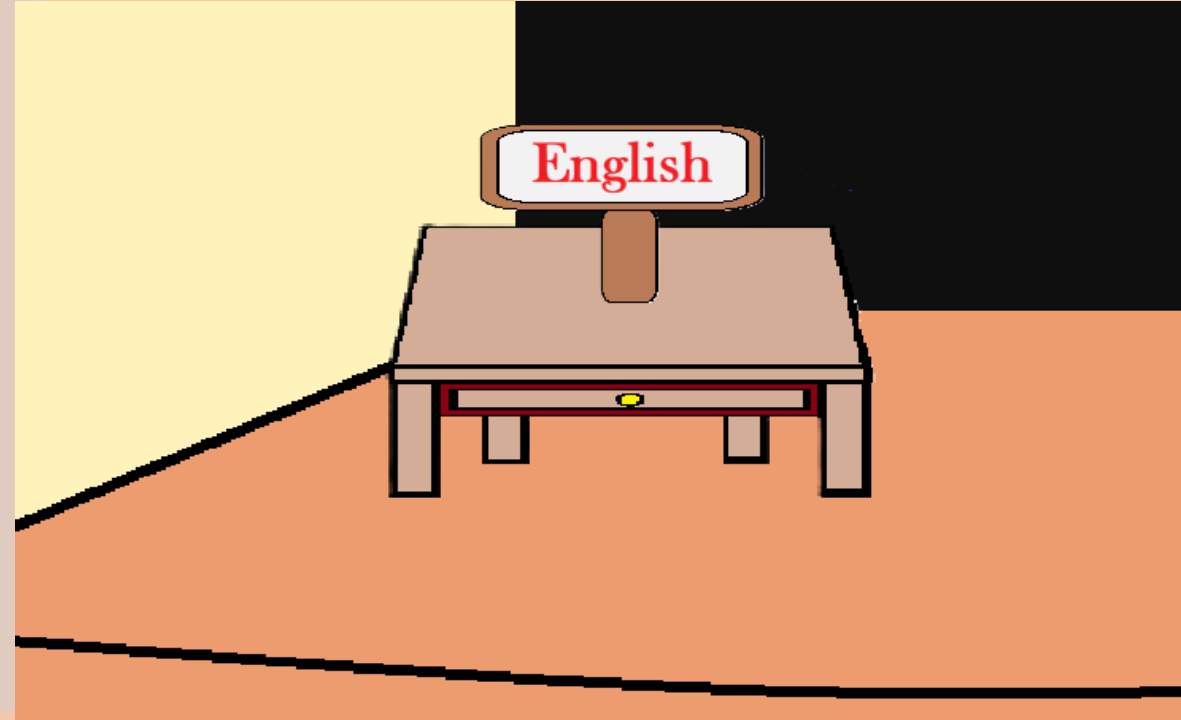

Written by Russell Holton
Illustrated by Russell & Somkamon Holton

Lek and Luca were at school, and it was a special day. They weren't attending any lessons because it was the school fair. This was one day of the year when students could learn more about the subjects taught in school.

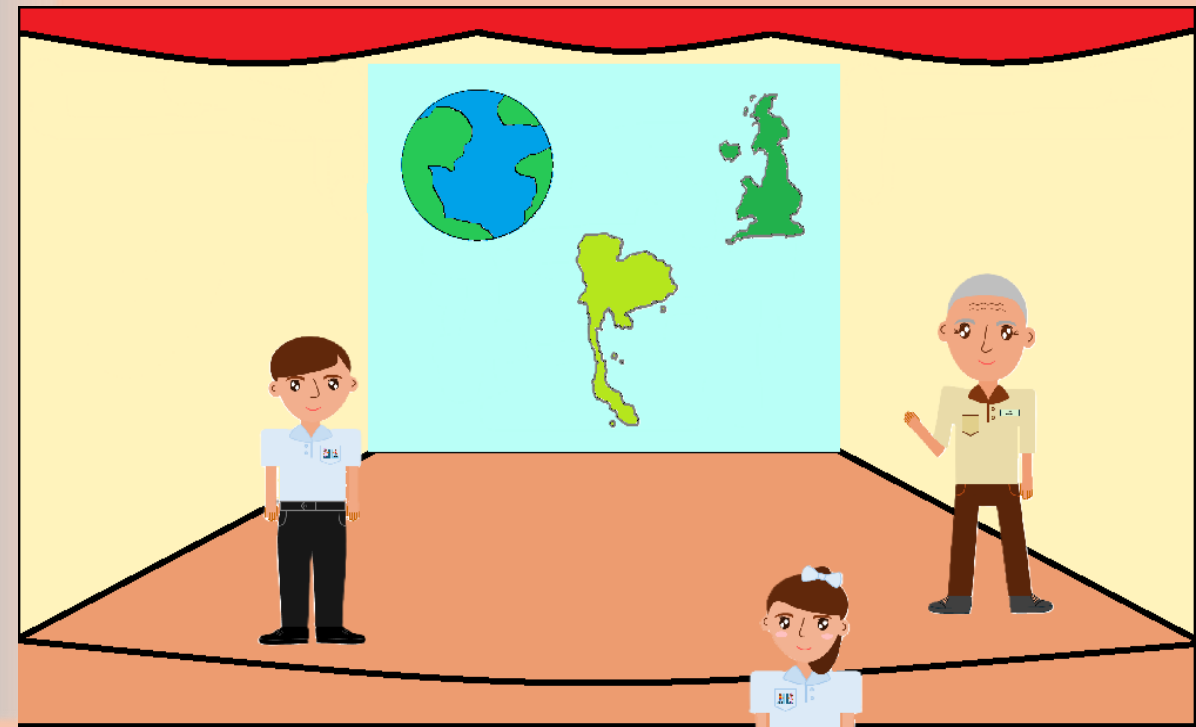

The subjects were displayed on different stages, and each one had some interesting facts about that subject.

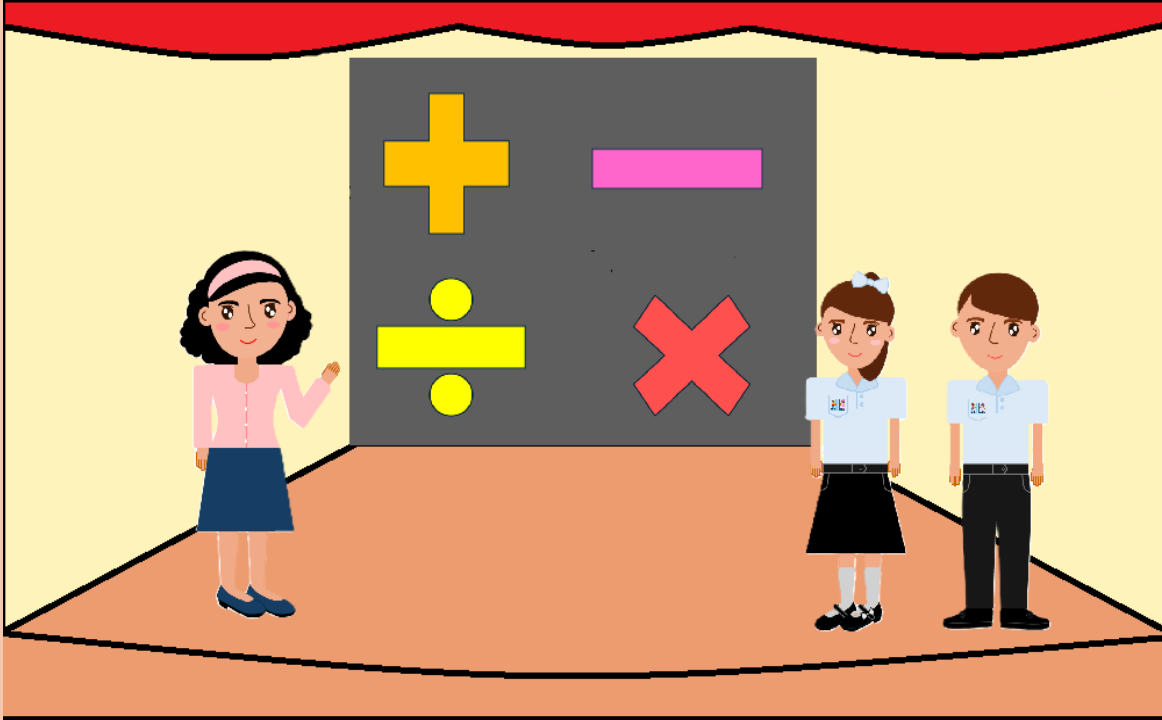

Lek was interested in history, so she visited this subject first. In history we learn all about the past from ancient Egypt to events in the twentieth century.

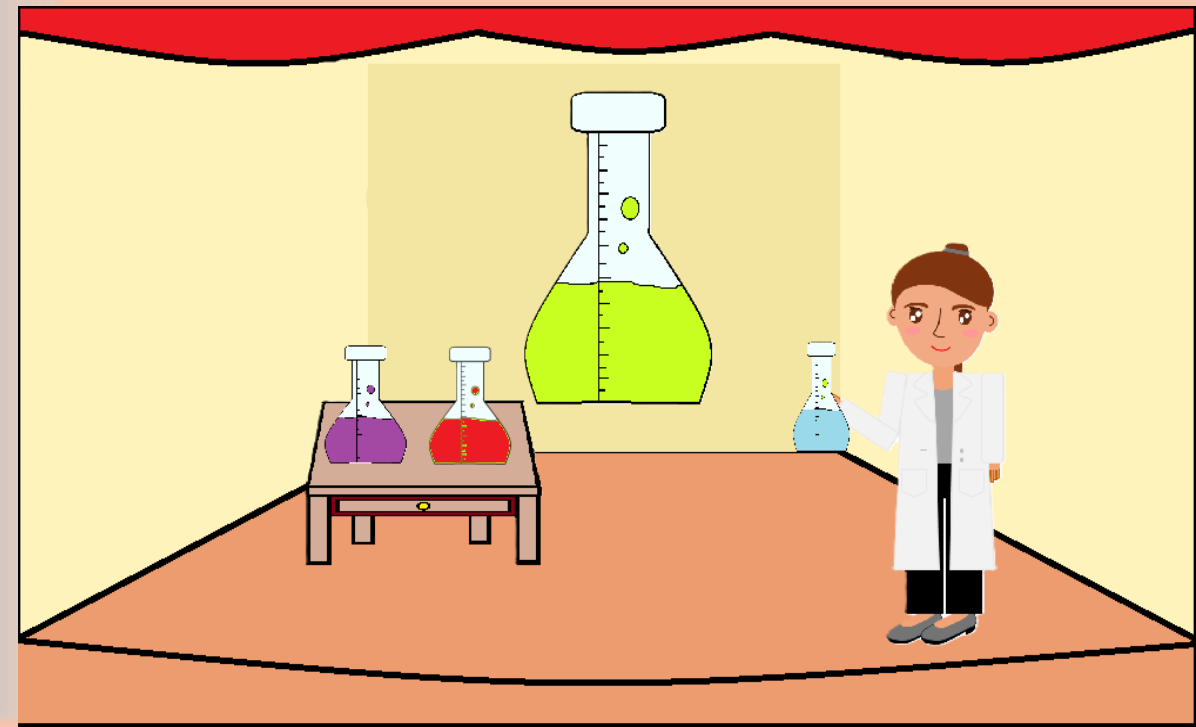

Luca liked to travel so he visited the geography display. In geography we learn about the whole world, but we also learn about weather and the environment.

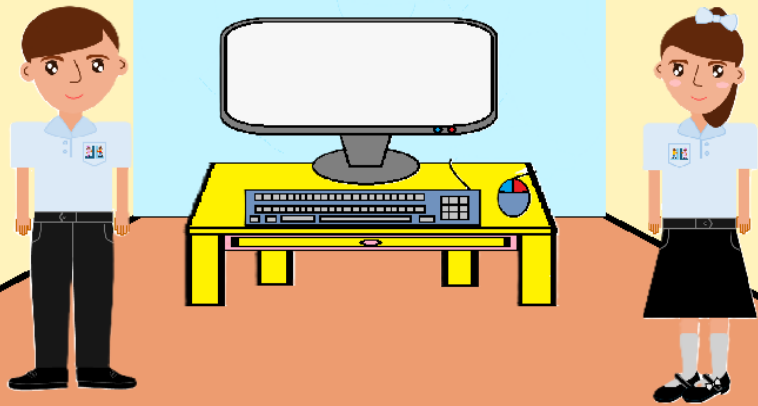

The next display had some interesting math's models. Math's isn't just about numbers it's also about shapes and logic. It's so important it helps us understand the whole universe.

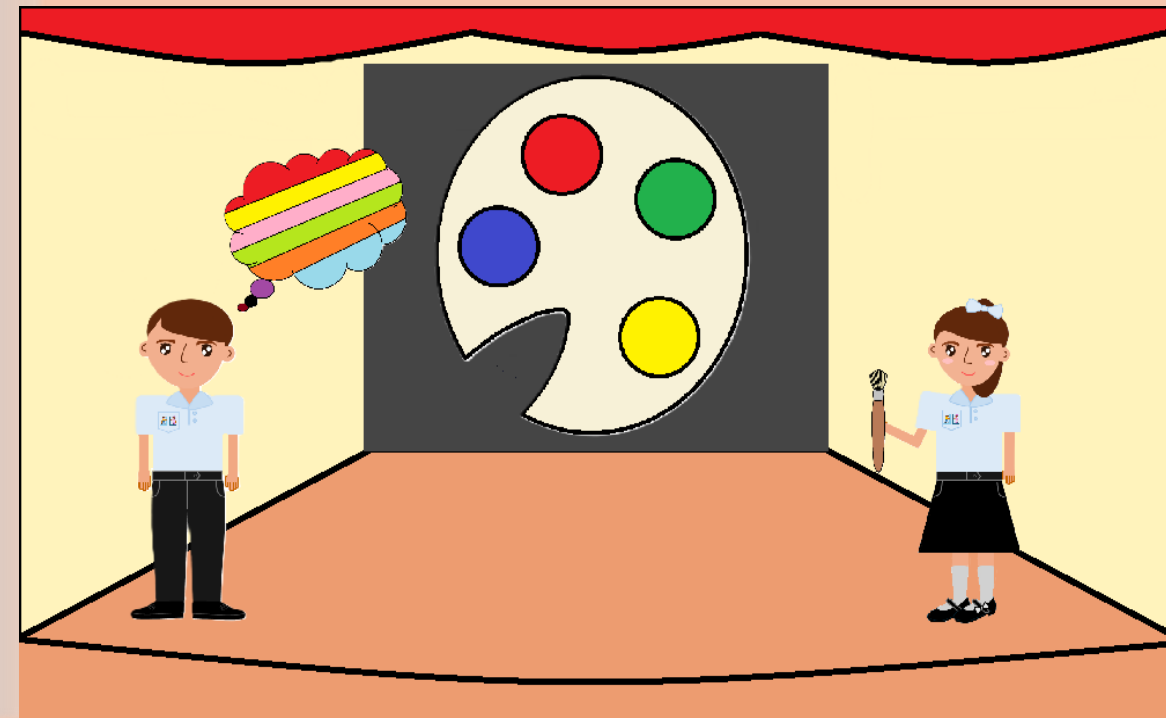

Up next was the display on science. This subject is varied and includes biology, chemistry and physics.

Lek moved onto a display about computing. Computing has completely changed the world, and it gives us new and exciting ways to learn and communicate with each other.

Lek and Luca noticed a very bright and colourful display all about art. Art includes drawing and painting, but it also includes sculpting, and any other creative activity you can think of.

Another creative display was drama. All the best actors start their drama classes in school. It's fun to play a character in a play.

The last display was English. This is an important subject because without good language skills we find it hard to communicate. Learning another language is fun, and a good way to build confidence.
